

MAP OF EVOLUTION

Flinders Academic Science Club
direct.me/flasc

Created 2024. Branch lengths & unlabeled intersections have no meaning. The full tree incl. extinct species is far more complex. Data is subject to ongoing research. All information was adapted from Kurzgesagt's much prettier 'Map of Evolution' poster, created in 2021 and available for sale online. Their data was primarily from Open Tree of Life, accessed via OneZoom Tree of Life Explorer.
